Notes: NM: Not Meaningful. NA: Not Available. P/E is calculated based on TTM 1Q 2014 net profit and current prices. P/BV is based on 31-March-2014 shareholders' equity and current prices. Dividend Yield is based on FY2013 cash dividends & current prices. Dividend Yield for companies that did not yet hold their AGM is based on FY2012 cash dividends and current prices. Valuation multiples for companies that have not yet disclosed their 1Q -2014 financials are still based on FY 2013 net profit and shareholders' equity as of 31-March -2014 DTD: daily change. MTD: Beginning of Current Month to Date YTD: Beginning of Year to Date. AED:UAE Dirham. DTD % change for individual stocks is based on the change in closing prices as being provided by Abu Dhabi Securities Exchange. DTD % change in sectors and total market is based on the daily change in market capitalization (market capitalization is calculated based on closing price and current number of share capital) which might not conform to the benchmark return.  
\* Companies that vary in their fiscal years are treated separately to adjust for recent results announcements.

Beta is the tendency of a security's returns to respond to swings in the market. A beta of 1 indicates that the security's price will move with the market. A beta of < 1 means that the security will be less volatile than the market. A beta of > 1 indicates that the security's price will be more volatile than the market. For example, if a stock's beta is 1.1, it's theoretically 10% more volatile than the market. Beta is calculated based on the daily share price returns versus ADX General Index for the companies which have a minimum trading history of 1 year. Low Beta is mainly due to light trading activities as most of the stocks that have relatively low beta are rarely traded in the market.
