Notes:
NM: Not Meaningful. NA: Not Applicable. . P/E calculated based on the earnings for TTM 1H-12 and current prices. If calculated P/E is negative or greater than 80, it is represented by NM. P/B is based on the equity figures as of 30-June-12 and current prices. Dividend Yield for individual stocks is based on the year end 2011 DPS & current prices. All Valuation multiples for companies that have not yet disclosed thier financials for 1H-12 are still based on earnings for Q1-12 and equity as of 31-Mar-12. DTD: daily change. MTD: Beginning of Current Month to Date YTD: Beginning of Year to Date. AED:UAE Dirham. DTD % change for individual stocks is based on the change in closing prices as being provided by Dubai Financial Market. DTD % change in sectors and total market is based on the daily change in market capitalization (market capitalization is calculated based on the last traded price) which might not conform with the benchmark return.

We have excluded all the losses incurred by the Kuwaiti companies listed in DFM and Gulf Finance House while calculating the Price-to-Earnings Multiple (P/E) for the aggregate market and their respective sector.

Beta is the tendency of a security's returns to respond to swings in the market. A beta of 1 indicates that the security's price will move with the market. A beta of < 1 means that the security will be less volatile than the market. A beta of > 1 indicates that the security's price will be more volatile than the market. For example, if a stock's beta is 1.1, it's theoretically 10% more volatile than the market. Beta is calculated based on the daily share price returns versus DFM General Index for the companies which have a minimum trading history of 1 year. Low Beta is mainly due to light trading activities as most of the stocks that have relatively low beta are rarely traded in the market.
